Notice of Allowability

Part of Paper No./Mail Date 20040813

Application/Control Number: 10/717,955

Art Unit: 2816

DETAILED ACTION

Response to Amendment

1. The amendment received on 07/15/04 has been reviewed and considered with the following results:

As to the objections to the specification, Applicant's amendments of the specification have overcome the objections, as such; the objections to the specification have been withdrawn.

As to the objections to the claims, Applicant's amendments have overcome the objections, as such; the objections have been withdrawn.

As to the rejections to claim 15, under 35 U.S.C. 112, 2nd paragraphs, Applicant's amendments have overcome the rejections, as such; the rejections have been withdrawn.

As to the prior art rejections to the claims, the prior art rejections of the claims made in the previous Office Action are now withdrawn in view of the examiner's amendment. Therefore the case is found to be in allowance condition for the reasons as set for below.

REASON FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

The prior art of record does not disclose or suggest a circuit (300 in instant Fig.3) for dividing periodic input pulses (clkin) by a preset integer M (PLLDIV), as recited in claim 5, comprising a dual modulus prescaler (310); a swallow counter (330); and specifically the limitation directed to a program counter (320) to generate a reset signal (counter_reset) in response to the prescaler receiving the Mth input pulse, and wherein the swallow counter changes the modulus control signal (DIV4) in response to the reset signal.

Art Unit: 2816

Claim 9 is allowed for similar reasons; note the above discussion with regard to claim 1.

The prior art of record does not disclose or suggest a method (as shown in Figs. 7-10), as recited in claim 16, a step of generating the prescaled pulses (924) includes initializing (810) a vector of state variables (D2D1D0: 111) when the prescaled pulse is generated (CK45=1), and updating (820) the vector during the next input pulse in a way that is indifferent to the updated modulus control signal (DIV4=XX).

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hai L. Nguyen whose telephone number is 571-272-1747 and Right Fax number is 571-273-1747. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy Callahan can be reached on 571-272-1740. The official fax phone number for the organization where this application or proceeding is 703-872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 571-272-1562.
